

Trading & market-data technology for the LME and metals markets

Trading technology, **built around metals**

For **20 years** we've built technology for the LME and metals markets, and today we power operations across participants and across the metals trading lifecycle. Our story spans **35 years** in capital markets, working with exchanges, brokers and clearers to streamline, integrate and automate the trade lifecycle from execution to settlement.

Proven products, tailored to you

Already built and running, then shaped to exactly how your business wants to work: the speed of a product with the fit and flexibility of a bespoke build.

Metals & the LME in our DNA

Prompt dates, carries, average pricing, warrants: the mechanics that make LME trading different are built in, not bolted on as an afterthought.

Supported by the people who built it

Direct, senior support from our own UK team. No call-centre tiers, no prolonged lead times: we build long-term client partnerships based on high quality delivery and support.

Our products — take one, or the whole platform

Sinara LME & Metals Trading Platform the complete metals solution, end to end

Sinara OEMS

Order & execution management for both in-house & external users.

Sinara CTRM

Commodity trade & risk management: the trusted back-end you need to power your business.

Sinara Broker Portal

Client RFQ, orders & positions: a modern front-end connected to other Sinara or third-party platforms.

Sinara Matching Engine

High-performance matching for all trading needs.

SinaraMDP

Market-data distribution & integration, whether for simple end-of-day data or fast flowing realtime updates.

Sinara Inventory

Warrants & warehouse tokens, opening up new opportunities for the physical side of the market.

All modular, all **built on the SinaraTLC framework**, all with full LME rulebook support — and all customisable by us to fit your business.

Beyond off-the-shelf: an engineering partner

35
YEARS

Alongside our own products, we work as an engineering partner. Our people are full-time engineers who also know the markets, so they understand what you're trying to do as well as how to build it. Much of our work is in and around commodities and the metals markets, but our capability spans capital markets as a whole.

Build & Integrate

- › Bespoke system development
- › Systems integration
- › Venue & market-data connectivity
- › Cloud & containerisation

Test & Assure

- › Testing & QA as a service
- › Business analysis
- › Trading system consultancy
- › LME trading consultancy

Resource & Support

- › Project resourcing, weeks to years
- › On-site engineers
- › Managed services & support
- › Third-line support or full management

Examples of past projects

Commodities-futures RFQ system · option-pricing engine · containerised trade-matching system · on-site development for market-data integration · commodities inventory management system · analysis and recommendations for order management workflows — all from a few weeks' work to full platform builds.

“

...firstly, for their technical capabilities and innovation...secondly, their commitment to the projects and timely delivery was second to none. Finally, they are straightforward and easy to deal with and realistic about handling changing requirements.

Get in touch let's talk about your trading technology needs and see how Sinara could help make them happen.
